

**EFNDT WEB PAGE:  
PLATFORM FOR SEARCHING-LITERATURE, STANDARDS,  
PATENTS, LINKS**

**Hannelore Wessel**  
DGZfP Berlin, Germany

Presentation of online information services at EFNDT web page [www.efndt.org](http://www.efndt.org).

Main topic will be an introduction into the inquiry for literature in the field of NDT, welding, casting as well as steel and iron materials in a literature database of national and international publications collected by the German institutions: DVS-Verlag (publishing house of the German Association for Welding), VDG (Association of the German Casting Experts), VDEh (German Iron and Steel Institute) and DGZfP (German Society for NDT). The database is connected with an online shop where copies of publications can be ordered directly.

Furthermore other services will be presented, e.g., the information platform for standardisation. This platform includes various information on technical committees of national and international standards institutes. It presents results of actual national and international standards work. Finally it includes a database with the titles of national and international standards, legislation and technical regulations related to NDT and neighbouring fields (e.g. welding or destructive testing). Access to this platform is restricted for EFNDT member societies and DGZfP members only.

Furthermore, possibilities to search for patents and to European and international institutions will be presented.
