On February 7th, 2014, 200 people were present in Paris to celebrate the tenth anniversary of M2M, drawing together 35 companies from 10 countries.

Guests could visualize the latest M2M developments, thanks to live demonstrations of the new Gekko equipment and the SAUL method (Surface Adapted Ultrasound).

With ten years of existence, M2M is showing that a high-tech instrumentation company can grow in France in a very competitive environment through effective partnerships. In the coming years, keeping innovation as a key-element of M2M strategy should reinforce the positioning of the company and make it one of the leading players in the NDT field.

Gekko software experience

Inspired by the smartphone industry, the GEKKO graphic user interface (GUI) has been designed for a maximum-confidence experience. GEKKO provides the operator with a choice to use dedicated apps, read inspection files and create custom apps. For each choice, step-by-step guidelines add clarity and simplicity to the condensed technology included in the portable phased-array system. The snapshot of the GEKKO GUI on the left displays the touchscreen options offered to the user when beginning to work.

M2M China

M2M China is the official representative of M2M for the Asian market. The Chinese market becoming increasingly more demanding, M2M China offers the complete range of M2M UT phased-array systems, as well as high-performance consulting support solutions.

M2M China is located at the Arch of Defense, in Chengdu, one of the most important cities in Western China regarding economic, transportation, and communication.

Dr. Bo Lu, formerly located in France is now leading the Chinese subsidiary

M2M team is growing

These past few weeks M2M has seen the number of its employees increasing, strengthening the industrialization and NDT departments. The team is now counting 46 employees. M2M warmly welcomes the rookies!
